

BIRD FEEDER

Need a bird feeder? Got Milk? Well, actually any gallon jug will do. Children love to make these easy feeders once adults cut the openings out of the plastic jug. You can cut two rectangular openings out of two different sides with the plastic spine between them or cut from one section right across into a second section for a much fuller opening. Be sure to leave at least 3 inches at the bottom to hold the bird seed and always keep the cap on the jug to keep the seed dry. Now let the kids decorate with bright paint, stickers, etc. Fill with bird seed and hang outside in a spot where you can enjoy.
